The Donald K. Buffmire Visiting Lectureship in Medicine

Have Doctors Lost Their Human Touch?

Presented by
Jerome Lowenstein, MD
Professor of Medicine at New York University

Over the course of his career, Dr. Jerome Lowenstein has watched the trend of medicine evolve from direct patient contact focused on the patient narrative to evidence-based medicine focused on clinical trials, and most recently to collecting "big data." He will explain how de-personalized data from these sources, while promising genomic-based personalized medicine, ironically requires practitioners to consider how the expression of genes is modified by the patient's environment, dietary and uniquely personal factors - leading the focus back to the individual patient narrative!

Friday, October 6, 2017

Lunch is served at 11:30 AM, Lecture begins at noon
DuVal Auditorium, Banner – UMC Tucson

RSVP:
